HDOC Day-74

1. Create an enumeration for months and print how many days each month has.

Python program:

```
from enum import Enum

class Month(Enum):
    JAN = 31
    FEB = "28 or 29"
    MAR = 31
    APR = 30
    MAY = 31
    JUN = 30
    JUL = 31
    AUG = 31
    SEP = 30
    OCT = 31
    NOV = 30
    DEC = 31

month = input("Enter month (e.g., FEB): ").strip().upper()

try:
    days = Month[month].value
    print(f"{days} days")
except KeyError:
    print("Invalid month")
```

Sample input: FEB
Sample output: 28 or 29 days

2. Define an enumeration with SUCCESS, FAILURE, and TIMEOUT, and print messages accordingly.

Python program:

```
from enum import Enum

class Status(Enum):
    SUCCESS = 1
    FAILURE = 2
    TIMEOUT = 3

status = input("Enter status: ").strip().upper()

messages = {
    Status.SUCCESS: "Operation Successful",
    Status.FAILURE: "Operation Failed",
    Status.TIMEOUT: "Operation Timed Out"
}

try:
    print(messages[Status[status]])
except KeyError:
    print("Invalid status")
```

Sample input: FAILURE
Sample output: Operation Failed
