HDOC Day-53

Question: Write a C program using pointers to calculate the product of all array elements except the current element, without division. Print results separated by commas.

C Program:

```
#include <stdio.h>

void product_except_self(int *nums, int size) {
    int answer[size];
    int product = 1;

    for (int i = 0; i < size; i++) {
        answer[i] = product;
        product *= nums[i];
    }

    product = 1;
    for (int i = size - 1; i >= 0; i--) {
        answer[i] *= product;
        product *= nums[i];
    }

    for (int i = 0; i < size; i++) {
        if (i > 0) printf(", ");
        printf("%d", answer[i]);
    }
    printf("\n");
}

int main(void) {
    int size;
    scanf("%d", &size);
    if (size <= 0) return 0;
    int nums[size];
    for (int i = 0; i < size; i++)
        scanf("%d", &nums[i]);
    product_except_self(nums, size);
    return 0;
}
```

Sample Input and Output:

```
Input:
4
1 2 3 4

Output:
24, 12, 8, 6
```
