

HDOC Day 12, 13 & 14 - C Programs

Simple solutions suitable for a first-year B.Tech student.

HDOC Day 12 - Q1: Sum and Product of First and Last Digits

```
#include <stdio.h>

int main() {
    int num, first, last, temp;

    printf("Enter a number: ");
    scanf("%d", &num);

    last = num % 10;
    temp = num;

    while (temp >= 10)
        temp = temp / 10;

    first = temp;

    printf("Sum = %d\n", first + last);
    printf("Product = %d\n", first * last);

    return 0;
}
```

Expected result: Example: Number = 12345 -> Sum = 6, Product = 5

HDOC Day 12 - Q2: Count Digits Lesser, Equal and Greater than k

```
#include <stdio.h>

int main() {
    int num, k, digit;
    int lesser = 0, equal = 0, greater = 0;

    printf("Enter a number: ");
    scanf("%d", &num);
    printf("Enter k: ");
    scanf("%d", &k);

    while (num != 0) {
        digit = num % 10;

        if (digit < k)
            lesser++;
        else if (digit == k)
            equal++;
        else
            greater++;

        num = num / 10;
    }

    printf("Count_lesser = %d\n", lesser);
    printf("Count_equal = %d\n", equal);
    printf("Count_greater = %d\n", greater);

    return 0;
}
```
